Re: Class II Permissive Change for FCC ID#: ZHX-370-00012-01

We request a Class II Permissive change to our wireless camera system grant.

Our system uses two radios, in the 915MHz and 2.4GHz ISM bands. To date, the product employs a separate dipole antenna for each radio. This change includes combining the radio outputs with a splitter/combiner module, and connecting to a single directional antenna. The net gain of the new antenna system is less than or equal to the dipole antenna solution.

No changes to the approved radio module are required. This change involves external antenna connections only.

Dated this 20th of September 2012

Sincerely,

Mark Sapper  
Hardware Development Manager
